I just spoke to Jason Silvertooth, who was onboard during the initial days of the downtown reach sediment reconnaissance and he confirmed that this sediment probing data was collected during that work back in late March. There is no date on the Figure 1 to confirm that but by his description that was the work they did during the sediment reconnaissance.

Dear Davis,

Thanks for sending your proposed upriver locations yesterday, we have not had a chance to deep dive into these yet, but we'll review before our meeting tomorrow scheduled in person on Thursday at 130 pm at your office (I'll send webEx invite shortly). Attached are our revised materials for discussion tomorrow based on our previous tech-to-tech meeting. These include:

1. Revised peeper design depth (Fig 3)
2. Draft protocol for measuring redox
3. Proposed target areas for peepers (revised)
4. Supporting data table
5. 2018 upriver soft sediment probing data ((Fig 1). First glance at these results, which were used to revise the PW target areas.

We look forward to our continued discussion tomorrow.
